Dunlop Street East Improvements – Mulcaster Street to Toronto Street

Notice of Public Information Centre

The City of Barrie is proposing streetscape improvements on Dunlop Street from Mulcaster Street to Toronto Street, as previously recommended through the Dunlop Street Corridor Improvements Class Environmental Assessment (December 2, 2015). These improvements will create a flexible street environment which will better accommodate pedestrians of all abilities, allow downtown merchants to better utilize the boulevard for outdoor retail and patios, and to facilitate the use of the street for major cultural and tourism based events on a temporary basis.

The proposed design will:

- include a pedestrian friendly, enhanced streetscape, that will ensure accessibility for all users;
- facilitate a patio program providing operational flexibility and ease of implementation on a seasonal basis;
- renew existing infrastructure (sanitary and storm sewers, watermain and utilities) as deemed necessary;
- introduce green infrastructure throughout the corridor to assist in the removal of road pollutants from stormwater run-off, while providing fertile environments for the long-term health of street trees;
- modernize the approach to street parking through the replacement of parking meters with centralized 'pay-and-display' stations;
- support Memorial Square/Meridian Place as a key downtown public space through compatible aesthetics and function;
- provide other amenities (planters, enhanced lighting, trash/recycling receptacles, benches, bike racks) to enhance the public environment.

To present the proposed Dunlop Street improvements and seek community feedback, a Public Information Centre (PIC) has been scheduled as follows:

Date: Thursday, April 19, 2018
Time: 4:00pm to 7:00pm
Location: City Hall Rotunda – 70 Collier Street

The PIC will be an informal drop-in session where participants can review the information presented, ask questions of City staff and the design team, and provide feedback to help guide the finalization of the design.

Should additional information be required, or should you wish to be added to the Project Contact List for future updates regarding the study, please contact:
